U.S. Army Soldier and Biological Chemical Command

Aerosol Research

The Aerosol Science and Technology (AST) Team performs basic and applied research on clouds and single particles -- natural or man made. Our test facilities can measure aerosols of any type or kind (biological or chemical). Complete characterization of aerosol particle size and mass concentrations is routinely performed. The AST Team's "Stealth Tube" provides an opportunity for developers to test their equipment and applications in a realistic, controlled environment.

For more detailed information on our capabilities, please visit our web site:
www.sbccom.apgea.army.mil/RDA/aerosol/index/htm .

For additional information, please E-mail the AST Team at asteam@astt.apgea.army.mil, call our locator desk at 410-436-2326, or fax to 410-436-2742.
